

Project Documentation Phase

1. Final Report Template

1.1 Project Title

Sports Hall Booking System using ServiceNow Service Portal

1.2 Project Abstract

The Sports Hall Booking System is a web-based application developed using the ServiceNow Service Portal. It automates the process of booking sports halls for students and faculty. The system eliminates manual booking, reduces scheduling conflicts, and improves efficiency through online booking, approval workflows, and notifications.

1.3 Introduction

The purpose of this project is to develop a centralized system for managing sports hall bookings in an educational institution. The system ensures easy access, real-time availability, and automated approval processes.

1.4 Objectives

- To automates sports hall booking process.
- To eliminate manual errors and double booking.
- To provide real-time availability of halls.
- To improve communication through notifications.
- To maintain booking history digitally.

1.5 System Overview

The system is built using ServiceNow Service Portal, which provides a user-friendly interface for booking. Administrators manage approvals through ServiceNow workflows.

1.6 Modules

- User Module
- Administrator Module
- Booking Module
- Notification Module
- Reporting Module

1.7 Technology Used

- ServiceNow Platform
- Service Portal
- Flow Designer
- Business Rules
- JavaScript
- HTML & CSS

1.8 Conclusion

The system successfully automates sports hall booking and improves efficiency, transparency, and user satisfaction.

2. FSD (Functional Specification Document) Format

2.1 Introduction

This document defines the functional requirements of the Sports Hall Booking System developed using ServiceNow.

2.2 Scope

The system allows users to book sports halls online, while administrators manage approvals and scheduling.

2.3 Functional Requirements

User Functions

- User login
- View available sports halls
- Submit booking request
- View booking status
- View booking history

Admin Functions

- View all booking requests
- Approve or reject requests
- Manage sports hall details
- Generate reports

2.4 System Workflow

1. User logs into Service Portal.
2. User checks hall availability.
3. Users submit booking requests.
4. Systems sends request to Admin.
5. Admin approves/rejects request.
6. System sends notification to user.
7. Booking is stored in databases.

2.5 Inputs

- User details
- Hall selection
- Date and time
- Purpose of booking

2.6 Outputs

- Booking confirmation
- Approval/rejection status
- Booking history

2.7 Constraints

- Only authorized users can book halls.
- Booking depends on availability.
- System requires internet access.

2.8 Assumptions

- Users have valid ServiceNow credentials.
- Sports halls are pre-registered in the system.

2.9 Security

- Role-based access control
- Secure login authentication
- Data protection in ServiceNow tables

3. FSD Documentation Format (Detailed Design Format)

3.1 System Architecture

Layers

- ☐ Presentation Layer (Service Portal)
- ☐ Application Layer (Business Rules, Flow Designer)
- ☐ Data Layer (ServiceNow Tables)

3.2 Data Design

Tables Used

- ☐ User Table
- ☐ Sports Hall Table
- ☐ Booking Table
- ☐ Approval Table

Key Fields

- ☐ User ID
- ☐ Hall Name
- ☐ Booking Date
- ☐ Time Slot
- ☐ Status

3.3 Process Design

Booking Process Flow

1. User submits request
2. System validates data
3. Availability check performed
4. Request sent to admin
5. Admin decision recorded
6. Notification sent to user

3.4 UI Design

- ☐ Login Page
- ☐ Sports Hall Listing Page
- ☐ Booking Form Page
- ☐ Status Page
- ☐ Admin Dashboard

3.5 Workflow Design

☐ Trigger: New booking request

☐ Condition: Hall availability check

☐ Action:

- Send to approval
- Update status
- Send email notification

3.6 Business Rules

- Prevent duplicate bookings
- Validate required fields
- Ensure correct date/time selection
- Auto-update booking status

3.7 Notifications

- Booking submitted
- Booking approved
- Booking rejected

Phase 6 Outcome

At the end of the **Project Documentation Phase:**

- ☐ A complete final project report was prepared with objectives, modules, and conclusions.
- ☐ The Functional Specification Document (FSD) was created to define system requirements, inputs, outputs, and workflows.
- ☐ A detailed design document was developed covering architecture, data design, process flow, UI design, and business rules.
- ☐ The entire Sports Hall Booking System was formally documented in a structured and professional format suitable for academic submission.
